

Home Work – July 9th 2017

HTML PAGE

- Create your own HTML Page and name it “yourfirstname_yourlastname”.html
(for me it will be **ashish_ruhani.html**)
- Add Heading with H1. This should be the heading of your page.
- Format a 2-paragraph essay in an html page. Each paragraph should have tool tip title that shows up when you hover the mouse on it.
- Add sub heading with H2 to each paragraph.
- Add 1 image before the paragraph and size it so that it fits the page nicely. Have the path to this image be Absolute Path.
- Add another image after the 2nd paragraph and size it so that it fits the page nicely. Have the path to this image be Relative Path.

- Make sure the images that you are adding have correct path.
- It should have following:
 1. Page Title
 2. Page Header
